vscode连接

强烈推荐大家使用vscode在服务器上进行代码调试以及运行!!

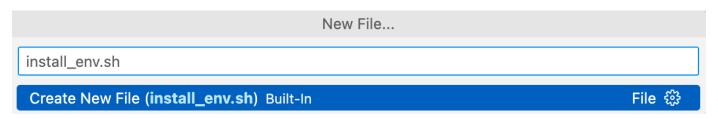

配置教程可以学习https://zhuanlan.zhihu.com/p/64849549

Anaconda的安装

已经配置好vscode并连接上服务器后,我们点击创建新文件

,设置名称为 install_env.sh

再按确认,然后把我发给大家的install_env.sh里面的内容copy到其中:

```
$ install_env.sh /home/prml1/install_env.sh
    #!/bin/bash
26
25
24
    echo "开始下载Anaconda安装脚本"
23
     wget https://mirrors.tuna.tsinghua.edu.cn/anaconda/archive/Anaconda3-2023.03-Linux-x86_64.sh -0 ~/anaconda_installer.sh
    echo "安装Anaconda到用户目录下的anaconda3文件夹"
21
20
    bash ~/anaconda_installer.sh -b -p $HOME/anaconda3
19
18
    echo "删除安装脚本"
17
     rm ~/anaconda installer.sh
16
15
     echo "将Anaconda添加到环境变量"
14 export PATH="$HOME/anaconda3/bin:$PATH"
13
12 echo "初始化conda"
11 conda init bash
10
    echo "激活conda环境"
 8 source ~/.bashrc
   echo "安装软件包: python 3.9, pytorch, torchvision, torchaudio, pytorch-cuda 11.8"
     conda install --yes python=3.9 pytorch torchvision torchaudio pytorch-cuda=11.8 -c pytorch -c nvidia
     echo "安装软件包: jinja2 3.0.3, nbconvert 6.4.4, matplotlib"
     conda install --yes jinja2=3.0.3 nbconvert=6.4.4 matplotlib
     echo "安装完成!"
27
```

保存

然后在vscode的terminal中运行 bash install_env.sh, 然后让它静静地安装就行了, 最后会提示"安装完成!"

如何开启anaconda环境

每次登录服务器的时候, 你看到的界面都是类似这样:

```
1 device has a firmware upgrade available.
Run `fwupdmgr get-upgrades` for more information.
Web console: https://linear:9090/ or https://192.168.31.26:9090/
Last login: Wed Apr 26 12:03:52 2023 from 166.111.180.123
$ ■
```

vscode中是这样:

PROBLEMS OUTPUT TERMINAL PORTS DEBUG CONSOLE

\$

此时都要执行一遍 bash 这一指令, 会变成类似这样:

```
$ bash
(base) prml1@linear:~$
```

\$ bash (base) prml1@linear:~\$

然后就可以愉快地使用python等指令运行程序了!

比如我们再用vscode创建一个 test.py:

test.py /home/prml1/test.py

print('hello world')

PROBLEMS OUTPUT TERMINAL PORTS DEBUG CONSOLE

\$ bash (base) prmll@linear:~\$ []

在下面的terminal中执行 python test.py

显示:

PROBLEMS OUTPUT TERMINAL PORTS DEBUG CONSOLE

\$ bash
(base) prml1@linear:~\$ python test.py
hello world
(base) prml1@linear:~\$

bingo!
